Frequently Asked Questions

What is the Level Dependent Payment System?

Your earnings are based on our Level Dependent Payment System, which lets you increase your earnings without raising your price.

Your commission for features under our Level Dependent Income system will vary depending on your current level. The higher your level is, the higher your commission will be.

Question: What are these levels?

Answer: There are 9 levels in the new payment structure - each with a different commission rate. The higher the level you reach during a period, the higher the percentage you will receive from your Level Dependent income.

Question: Can I have different levels for the Online and Offline categories?

Answer: Yes, of course. For example, you could reach level 4 in the Online category and level 6 in the Offline category. Your earnings with online features contribute to your Online category level; while your earnings with offline features contribute to your Offline category level. Some models are better at using Online features like Private Show, VIP Shows... while some are great at using Offline features like Messenger and Stories! The more you use our features, the higher your level will be.

Question: Question: Do charge-backs affect my level?

Answer: Charge-backs do not affect your current level.

Question: Can I go up a level during a Private show?

Answer: Your commission for a Private Show is based on your level for the Online category at the time the given show begins. This means that even if you reach a higher level during the show, it will be calculated according to the previous level.

Question: What happens if I have pending or unpaid earnings from the previous period? Is it added to the current one to help me reach a higher level?

Answer: Unfortunately, it is not. You start every period with 30% even if you have pending payments from the previous period.

Question: Can you give an example?

Answer: Of course! Let's assume that you earned \$1,500 in a period for the Online category. This means that you are at level 4 (\$1,000 - \$2,000) in the Online category and you will receive 45% of your earnings for the features which are included in this category. So if you have a \$2.99 per minute rate and someone takes you

to a five-minute Private Show, your total earnings for the Private Show will be: $\$2.99 \times 5 \times 45\% = \6.73 (After this Private Show your total income for the Online category would be \$1,506.73). Please note that this percentage only applies to income received on this level. Income earned on a lower level will result in lower commissions.
