

How can I set up my profile?

Models

It's time to complete your profile information and upload your avatar photo and background photo or video. This is a very important showcase since it's the visible information that users first see when they enter your profile. Plus, adding a background will positively impact your StripScore. What's to include is totally up to you, but don't forget that your avatar photo should not contain nudity and all sensitive body parts must be covered. Click [here](#) to learn about profile and cover image guidelines.

Profile information is arranged and displayed in [custom panels](#). You create your own personalized information panels and lay them out your own way. Write anything you want to share with the world – from your likes to your show schedules – and jazz it up adding images and hyperlinks to your social media. You have the option to make an artwork out of your public profile. Both your profile information and avatar photo can be edited in the "My Profile" section.

How can I set up my profile?

Next up is the cover photo. This is the picture that is displayed on your broadcasting window while you're offline. To update it, simply head over to your broadcasting page, and under the "My Details" tab, you will see a "Cover Picture" panel to upload your best shot. Without a cover photo, you won't be able to start the broadcast.

Additionally, you can add an [Epic goal](#), which is a great way to motivate your audience to send you tips, even if you're offline. You will find the panel to enable it in "My Profile".

Last but not least, you can create your Gallery where you can upload your Paid or Free photos and videos.
