

Setting up custom panels

Models

Thanks to the custom panels you can personalize your profile and make it shine. They enable you to not only display your general profile information, but also to create show schedules, show announcements and even blogs, accompanied by images and hyperlinks.

To get started, go to "My Profile". Under "My Information" you can find "My Custom Panels", and here's where the magic starts. Click on "+ Add Panel" and a modal window with the panel will pop up.

You can include title, description, an image with an URL link and add as many panels as you wish. Note that only PNG, JPG and GIF formats are supported and that image shouldn't be larger than 5 MP.

Once your panels are created, you can rearrange them and lay them out your own way by dragging and dropping them in different locations. Regret something already on display? Simply edit or delete the panel going back to your "My Profile" section.
