

What's StripScore and how to boost it?

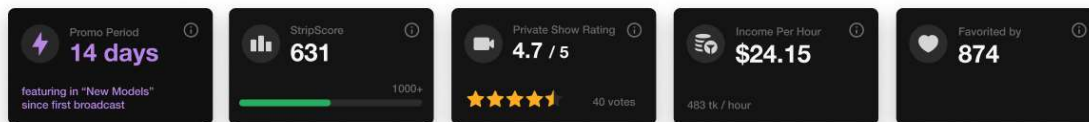

What's StripScore and how to boost it?

Models

StripScore is an indicator that helps you rank higher.

A higher StripScore can boost your chances of appearing in better positions on the platform. Higher placement may also make your room more visible to potential viewers.

StripScore is based on many factors, including how much you earn, how complete your profile and broadcast settings are, etc.

You can improve your StripScore over time. Your StripScore depends on:

Well-described Tip Menu

Quality of your stream (good internet connection and higher video resolution are important)

Turned-on microphone during a broadcast

Uploaded background photo or video

Public photo albums and videos

Detailed Goal and Topic for your broadcasts

Complete profile

Private show rating

Your revenue roughly accounts for 50-80% of your StripScore. The other factors account for 20-50%. So you can still improve your position on the site even if you don't get that many viewers yet.

Your StripScore will rise over time if you follow all the guidelines above and perform consistently.

There are no penalties for taking days off, so feel free to have your holidays whenever you want. Your StripScore will not go down. Just bear in mind that fans tend to stick with models who stream often and regularly.

What's StripScore and how to boost it?

Here is the table summarizing all the factors that can affect your StripScore:

Factors	Impact
Your average revenue per hour	Highest
Well-described Tip Menu (4 options minimum)	High
