

Video and Audio Rating

Why does quality matter?

Your stream is your stage – the better it looks and sounds, the more professional, attractive, and engaging you appear to visitors. A strong first impression keeps viewers in your room longer, increases your tips, and helps turn visitors into loyal Members.

That's why our support team regularly reviews live streams for video and audio quality. This helps you stand out in a crowded space – and gives us a chance to help you improve.

How the video rating process works

Our support team evaluates both the technical and visual aspects of your stream through a video rating. This includes:

Room setup

Lighting and camera angle

Your appearance (makeup, hairstyle, outfit)

If something could be improved, we'll give you clear, step-by-step feedback during support chats so you can level up your stream fast.

Video & Audio: Make a great impression

Video Quality

Your image should be sharp, stable, and flattering. A poor video experience makes Members leave your room — even if you look amazing!

Minimum resolution: HD (720p – 1280×720)

Recommended: Full HD (1080p – 1920×1080)

No freezing or lag — stream must be smooth.

Well-lit and in focus — Members should see you clearly.

Front-facing lighting only — avoid light behind you.

Audio Quality

Clear, well-

synced audio makes your personality shine. Members lose interest quickly if they can't hear you well.

No background noise (TV, traffic, fans, etc.)

Steady volume — not too quiet or distorted

Sync your audio with your video

 Creating a professional stream setup

 Your Space

Choose a clean, bright room — bedrooms and living rooms work best.

Use large furniture like a double bed or sofa to fill the space naturally.

Add interest: pillows, plants, wall art, soft lights — these small touches make your room warmer.

Hide clutter with curtains or by changing your camera angle.

 Camera Framing

Camera should be at or just below eye level.

Show your whole body and surroundings — avoid squatting or awkward angles.

 Your Look

Wear well-fitted, flattering outfits that match your streaming category.

Avoid thin stripes, silicone straps, or busy patterns — they look bad on camera.

Choose bold colors, wear heels, and rotate outfits often to keep things fresh.

Plan theme days — Members love variety.

 Makeup Tips

Use slightly stronger makeup than usual — cameras can wash you out.

Contour to highlight your features.

Match foundation to your neck and chest, not just your face.

Choose colors based on your seasonal skin tone for a polished result.

 Tech setup: tools that help you succeed

Your stream quality depends on your equipment. Investing in the right gear can improve your earnings.

Equipment Essentials

A high-resolution camera

A reliable PC or smartphone

Good internet connection

Lighting Matters

- Use  from the front and sides.

Avoid backlight — it creates shadows or blurry images.

Adjust brightness and white balance on your camera to match the room.

Avoid These

Watermarks or logos

Beauty filters

Any effects that change your natural appearance
