

Lighting Guide

Look your best: easy lighting tips for better streams

Great lighting can instantly make your stream look more professional — and help you earn more. With the right setup, you'll avoid pixelation, strange colors, or shadows that distract Members or make your video look low quality.

General lighting principles

- Use **balanced, even lighting** across your entire room.
- Avoid **shadows, natural light**, and **yellow tones**.
- Always verify lighting by checking your **video feed**, not just the room.
- A camera requires **more light** than the human eye.

Recommended

- **LED bulbs** with a **5500K daylight color temperature**.
- Rooms with **white or light-colored walls** to reflect light better.
- LEDs instead of CFLs — LEDs are more efficient and modern.
- Do not place lights **behind you**.

Avoid

- **Natural daylight** — it changes constantly and ruins consistency.
- **Yellow bulbs / halogen lights** — they distort skin tones.
- **Ring lights** — too harsh and flat for live video.
- **Colored LED strips** — they flicker and reduce stream quality.
- **Spotlights** — too intense, create hot spots and deep shadows.

Lighting Setup Options

Budget lighting setups

Table + ceiling light setup (low-cost option)

An easy starting point using household lights. Use the **same type of LED bulb** in all lamps to maintain color consistency.

 Setup examples:

- **2 table lamps + 1 ceiling light**

Table lamps on opposite corners, aimed slightly at you and the background. Ceiling light above and in front.

- **3 table lamps + 1 ceiling light**

Add a third lamp directly above your monitor.

- **4 table lamps + 1 ceiling light**

Add two side lamps on nightstands or nearby furniture. All lights should face you and fill the room evenly.

 Use LED bulbs with **at least 800 lumens** per bulb for small rooms. Larger spaces may require bulbs rated at **1600–2600 lumens** for full coverage.

Medium lighting setups

Umbrella + ceiling lights (recommended for most Models)

A more flexible setup that offers **professional results** for streaming and content creation.

- Use **white (diffusion)** or **silver (reflective)** umbrella lights.
- Choose lights with **1–5 sockets** based on room size.
- Use **LED bulbs** with **800–2600 lumens** per socket.
- Adjust light **distance, angle, and height** to avoid shadows or glare.

 Setup examples:

- **1 umbrella + 1 ceiling light**

Umbrella in front of you. Ceiling light above and in front.

- **1 umbrella + 1 table lamp + 1 ceiling light**

Table lamp on one side, umbrella on the other. Both facing you and the background.

- **2 umbrellas + 1 ceiling light**

Umbrellas on the left and right sides. Ceiling light centered above.

- **3 umbrellas + 1 ceiling light**

Two umbrellas at the sides, one in front. Ceiling light used only if necessary.

High-end setup (studio quality)

Softbox lighting (advanced option)

- Best for razor-sharp streams and professional video production.
- Recommended only if you have experience or external help (e.g., a photographer).
- Often combined with a **hair light** for depth.
- Ideal for **My Content** or **Contest** video creation.

Examples — what to avoid

Type	Reason to Avoid
Yellow halogen / Edison bulbs	Create unnatural tones.
Spotlights	Too narrow. Not designed for ambient streaming light.
Ring light	Meant for photography only. Not suitable for streaming.
Natural light	Uncontrollable and inconsistent. Causes dullness or graininess.
Colored LED strips	Can cause flickering and image degradation.

Managing shadows

Shadows distract viewers and hide your best angles.

To avoid them:

- **Sit or stand farther from the background** so light can hit you evenly
- Avoid **ceiling lights directly above your head** (they cause glare)
- **Tilt your lamps slightly** to fill in dark areas, not just blast light forward

 *Why it matters:* A clean, shadow-free setup keeps all eyes on you — and increases time spent in your room.

Recommended Cameras

 Choose the right camera: look sharp, earn more

Want a smooth, clear, high-quality video that helps you attract more Members? It all starts with your webcam. A good camera not only makes you look better—it also helps you qualify for the Good Video rating, which can lead to more visibility and more income.

 Minimum camera requirements

Resolution: 1920×1080 (Full HD)

Frame Rate: Minimum 30 FPS

Aspect Ratio: 16:9

Connection: USB preferred (plug and play)

For optimal results, combine a recommended camera with proper lighting and the JasminCam software.

 Recommended webcams

Model	Description
Logitech Brio 500	Full HD 1080p. Includes auto-framing and light correction.
Logitech C930e	H.264 compression and high-resolution lens. Performs well in low light.
Logitech StreamCam	Designed for content creators. Full HD 1080p via USB-C.
Logitech Brio 4K Pro	Streams up to 4K. Includes HDR, autofocus, and 5x digital zoom.
OBSBOT Tiny 4K mk1	High-quality sensor. Excellent clarity even in dim rooms.
OBSBOT Tiny 4K mk2	Enhanced CMOS sensor. Strong dynamic range and vivid output.
Insta360 LINK	HDR mode with fast auto-focus and strong exposure balance.

 Not recommended

Model	Description
Logitech Brio 300	Limited to mono sound. Does not offer true Full HD.

Model	Description
Devices under 1080	Cannot meet Good Video requirements.

Setup & configuration

Logi Tune Software (for Logitech Cameras)

Allows manual adjustment of image quality.

Recommended for Logitech devices (Windows/macOS).

You can download Logi Tune for Windows/macOS [here](#).

Key Settings

Setting	Recommendation
Autofocus	Off
Manual Focus	Set to 0 unless needed
Auto Exposure	Off
Exposure	Adjust carefully for lighting balance
Gain	Use to brighten image if needed
Auto White Balance	Off
White Balance	Match room lighting (lower = blue, higher = yellow)
Anti-flicker	Enable under artificial light
Brightness & Contrast	Fine-tune for a natural look
Saturation	Avoid increasing if the image has strong reds
Sharpness	Avoid increasing excessively — may cause grain
Filters	Not recommended

OBSBOT & Insta360 LINK Software

Adjust settings manually when lighting conditions are not ideal.

Apply the 180-degree shutter rule:

Shutter speed = $1 \div (2 \times \text{frame rate})$.

Example: For 30 FPS, use 1/60 shutter speed.

If lighting is balanced, leave settings on Auto.

Camera Splitter Guide

 Using a Splitter? Here's What You Need to Know!

A splitter lets you share your webcam across multiple apps at once. But, if you're just streaming on LiveJasmin, there's no need for one.

 Why avoid splitters (if you don't need them)?

May cause lag or syncing issues

Lead to resolution issues

If you stream on other platforms at the same time, then a splitter may be necessary.

 OBS Studio as a Splitter

OBS Studio can act as a virtual camera and it is available for Windows, macOS: [Download OBS Studio](#)

OBS Studio video guide

How To Import Settings to OBS

How To Set Up OBS For Streaming

01:25

How to use OBS as a splitter

00:52

 OBS Setup Overview

OBS setup has 5 key sections:

Section	Function
Preview & Scenes	Displays your stream layout. Only the visible content is broadcast.
Scenes Panel	Create and switch between different layout presets.

Section	Function
Sources Panel	Add webcam, image, or audio input devices.
Audio Mixer	Manage active microphones and monitor volume levels.
Settings	Configure resolution, encoding, and frame rate.

Preview & Scenes

Use the preview window to view your exact output.

Use scenes to group different configurations.

Navigation Tips

Right-click preview > Preview Scaling > Canvas

Hold Space + Scroll to zoom

Hold Space + Drag to move canvas

Sources Panel

Click the + icon to add:

Video Capture Device (e.g. webcam)

Audio Input Capture (e.g. microphone)

Configure your webcam:

Resolution/FPS Type: Custom

Resolution: 1280×720 or 1920×1080

FPS: 30

Color Space: 709

Color Range: Full

Buffering: Disabled

Order matters — top sources in the list are shown in front

Audio Mixer

Select the correct input device.

Mute unwanted devices.

Keep volume levels in the yellow zone (avoid red to prevent distortion)

Importing OBS Configs

We provide ready-made OBS configurations to save you time.

Encoder type	720p	1080p
Windows (Intel)	Download	Download
Windows (AMD)	Download	Download
Windows (Nvidia)	Download	Download
macOS (hardware)	Download	Download
macOS (software)	Download	Download

To Import:

Unzip the file.

Open OBS > Profile > Import.

Select the unzipped folder.

Apply the profile.

Verysoft Webcam Splitter

Only recommended if using external handycams or streaming to multiple platforms: [Download](#)
[Verysoft](#)

VerySoft Splitter video guide

What Are Splitters

00:32

Setting Up Verysoft

01:36

Setting Up JasminCam 5 with VerySoft

00:32

Basic Setup

Right-click the Verysoft icon (in system tray).

Set your actual webcam as Source.

Go to Source Resolution and select:

1920×1080

1280×720

864×480 (not recommended)

In Options:

Set Global FPS limit to 30

Enable Constant Output FPS

Set Transformation mode to Crop

Set Deinterlacer to Always off

Open JasminCam:

Select Verysoft Webcam Splitter as camera

Choose 1920×1080 resolution

Set correct Microphone

Troubleshooting Verysoft

Issue	Solution
Black stream	Make sure the source is set to your real camera.
Resolution mismatch	Use the same resolution in Verysoft and JasminCam.
Lag or freezing	Check CPU usage (Ctrl+Shift+Esc) and connection speed.

Issue	Solution
Deinterlace issues	Set to Always off in Options.
Poor frame rate	Ensure Global FPS = 30 and Constant Output FPS is enabled.

Follow this streamlined framework to produce better videos:

1. Pre-Production (Planning)

- **Define your goal and audience:** Understand what value you are providing and who you are talking to.
- **Write a hook:** The first 3 to 7 seconds are crucial. Grab attention immediately by stating the problem or promising a payoff.
- **Outline or script:** Keep your pacing tight by mapping out what you want to say beforehand.
- **Storyboard:** Plan your visual sequence, including the main shots and supporting B-roll. [\[1, 2, 3, 4\]](#)

2. Production (Filming)

- **Prioritize audio over video:** Audiences will forgive slightly grainy video, but they will click away if the audio is echoey or hard to hear. Use a dedicated external microphone and record in a quiet room.
- **Use great lighting:** You do not need expensive gear; face a window during the golden hour (just after sunrise or before sunset) to get soft, flattering light.
- **Frame your shot:** Follow the Rule of Thirds by placing your eyes about one-third down from the top of the frame. Keep your camera at eye level for a natural perspective.
- **Vary your angles:** If you are shooting a solo-talking head video, mix wide shots, medium shots, and close-ups. [\[1, 2, 3, 4, 5\]](#)

3. Post-Production (Editing)

- **Keep it simple and cut the fluff:** Trim out dead space, stumbles, and pauses to keep the pace engaging.
- **Add B-roll and graphics:** Break up visual monotony by overlaying related footage or photos on top of your main audio track.
- **Edit for the platform:** If you are making content for platforms like YouTube Shorts, TikTok, or Instagram Reels, ensure you are editing on a vertical timeline

• How to plan video content

• 1. Defining the target audience

- Without understanding your target audience, you won't be able to reach your customers and understand their true wants and needs. Research

your audience. Study their interests. Draw a detailed portrait of your target audience, including age, gender, marital status, employment, and additional interests. All of this will help you create content that will interest and engage your customers.

- **2. Choosing a video topic**

- The topic should be relevant to your target audience and support your marketing strategy. Determine what information you want to convey. Decide what story you want to tell or what problem you want to solve in your video.

- **3. Creating a script**

- A script is a blueprint for your video that describes the sequence of events, dialogues, and visuals. It helps you organize your thoughts and ensures that your footage develops logically. Write your script in advance, noting the key points and main issues you want to include.

Defining a video format

Various footage formats attract different kinds of attention. Choose the one that best suits your topic and the way you communicate with your target audience. It can be informative footage, a review, a video blog, or a viral video.

5. Planning the shooting and editing

To prepare for the shoot, start by determining the necessary materials. This includes planning the location, equipment, lighting, and any specific attributes you require. Additionally, take into account the post-production phase and consider the video [editing apps](#), tools, or technologies you will utilize to enhance the final product.

Tips for creating high-quality video content

Creating high-quality video content requires not only a combination of a professional approach and the right tools but also creativity.

1. Planning and preparation

Planning and preparation play a vital role in creating high-quality video content. Taking the time to carefully consider the concept, message, and structure of your video beforehand sets a solid foundation for a successful production. Here are some essential steps to follow during the planning stage:

- **Develop a script or outline:** Start by outlining the main points and structure of your video. If a scripted approach fits your content, consider writing a detailed script that includes dialogues, narration, and on-screen actions.
- **Identify the key points:** Determine the key points you want to communicate through your video. What is the core message you want to deliver to your audience? Understanding your objectives will help you focus your content and ensure that it aligns with your [marketing goals](#).
- **Gather the necessary resources:** Determine what resources, props, or equipment are needed to bring your video concept to life. This could include camera equipment, props, actors or presenters, locations, or any other elements necessary for a successful production.

2. Ensure high-quality sound

Sound is an integral component of your video content. To ensure a seamless viewing experience, it's crucial to prioritize sound quality. Invest in a high-quality microphone or consider using external professional audio devices that can capture clear and crisp audio. By doing so, you can enhance the overall production value of your videos and deliver a professional audio experience to your viewers.

3. Lightning, framing and composition

To ensure that your videos have a professional and polished look, it's important to use a professional quality camera or a smartphone with a good camera. Investing in quality equipment significantly increases the chances of shooting high-quality video content. Here are some key aspects to pay special attention to, lighting, framing, and composition.

- Lighting plays a crucial role in video production. Proper lighting can enhance the mood, clarity, and visual appeal of your footage. Whether

you're shooting indoors or outdoors, make sure to consider the intensity, direction, and quality of light.

- Framing refers to the way subjects and objects are positioned within the frame of your video. It is essential to carefully compose your shots to create a visually pleasing and balanced image.
- Composition involves arranging the elements within the frame to create a cohesive and visually appealing image. Consider the placement and relationship between different objects, subjects, or elements within the frame.

4. Visual elements

To enhance the entertainment value and dynamism of your video, incorporating various visual elements can make a significant difference. Here are some effective visual elements to consider:

- **Titles:** Including engaging titles throughout your video can help introduce different sections or highlight key points.
- **Transitions between frames:** Smooth transitions between video clips or scenes can create a seamless flow and enhance the overall viewing experience.
- **Graphic effects:** Integrate graphic effects strategically to enhance specific moments or emphasize important information. For example, overlaying text or graphics to highlight statistics, quotes, or key messages can make them more visually impactful and memorable.
- **Visual storytelling:** Utilize visual [storytelling techniques](#) to captivate your audience and evoke emotions. This can include incorporating relevant images, footage, or visuals that complement the narrative and enhance the overall storytelling experience.

5. Professional and hassle-free editing

Take advantage of [a video editor](#), such as Veed.io, Final Cut Pro or iMovie, which are readily available on MacBooks, to enhance your video content with professional-looking visuals. These powerful editing tools provide a range of features and capabilities that allow you to craft polished and visually captivating videos.

6. Create value

It is crucial to ensure that your video content provides value to your viewers. Consider the following points to ensure that your videos serve a purpose and resonate with your audience:

- **Solve a problem:** Before creating a video, ask yourself if it addresses a problem or challenge that your audience faces. Your video should provide solutions, insights, or practical tips that can help viewers overcome obstacles or achieve their goals.
- **Useful information or entertainment:** Determine whether your video offers useful information or entertainment value to your viewers. Depending on your target audience and marketing objectives, your video

can serve as an educational resource, delivering valuable insights and expert knowledge on a particular subject.

By focusing on providing value, whether through problem-solving, or useful information, your video content becomes more engaging and relevant to your target audience.

7. Promote your video content

Once your footage is polished and ready to be shared, it's time to kickstart your video promotion efforts. Promoting your video effectively can significantly increase its reach and engagement, driving valuable results for your marketing campaign. Here are some essential steps to take when promoting your video content:

- Use keywords, descriptions, and tags to optimize it for search engines.
- Share it on social media and blogs.
- Send it to your audience via email.
- Interact with viewer comments and feedback.
- Register your account and upload video teasers to be approved. We will send you a secure link to upload production ready videos

Our studio provides effective, multi-channel approach. By [optimizing for search engines](#), and leveraging social media and blogs, you can maximize the visibility and impact of your video content.
